The slope of the first drop that will be the most thrilling (without being dangerous) is -1.5 . You decide to connect these two straight stretches, $y = L1$ and $y = L2$, with

Get Free Calculus Roller Coaster Project Answers

a parabola of the form $y = f(x) = ax^2 + bx + c$, where x and $f(x)$ are measured in meters.

Project: Designing a Roller Coaster - AP Calculus / Wyzant ...

$y' = 2ax + b$. The origin is also on the parabola and at $x=0$ the tangent line has slope 0.7. Then $c=0$, so the parabola becomes $y = ax^2 + bx$, with the same derivative. So then $0.7 = 2a(0) + b$ --- first derivative of the parabola must be 0.7 at $x=0$. $b = 0.7$. The updated equation of the parabola is now $y = ax^2 + 0.7x$.

Applied Project: Building a Better Roller Coaster - YouTube

Roller Coasters Need Calculus Too! Abstract . Using the specifications of the given launch roller coaster, we were able to determine the position vector of the roller coaster as a function of time. After determining the position function, we took the derivative of this function to calculate the velocity of the coaster as a function of time.
