memory and uses them as required. Step 3 □ Processes the data and converts it into useful information.

Computer Fundamentals - Quick Guide - Tutorialspoint

The operating system's job. Your computer's operating system (OS) manages all of the software and hardware on the computer. Most of the time, there are several different computer programs running at the same time, and they all need to access your computer's central processing unit (CPU), memory, and storage. The operating system coordinates all of this to make sure each program gets what it needs.
