game studies, and digital media.

Do the rapidly expanding genres of digital literature mean that the narrative mode--novels, films, television drama--is losing its dominant position in our culture? Author Espen Aarseth eases our fears of literary loss (at least temporarily) by pointing out that electronic text requires an interactive response to generate a literary sequence. Where's the fun if you have to write your own ending? 21 illustrations.

This book presents a new methodology, ludonarrative synchronicity, to analyze the interplay between narrative and gameplay in video games. Using the BioShock franchise as a case study, this book aims to show the interaction of these two elements can form various subjects. Rather than prioritizing one over the other, ludonarrative synchronicity seeks to explore how video game texts function. By analyzing a trio of games focused on choice and control, this book manages to show how players, along with developers, can create their own subjects. Ludonarrative Synchronicity in the BioShock Trilogy will appeal not only to fans of the franchise, but to students and scholars of narrative theory, game design, and posthumanism.

Make More Immersive and Engaging Magic Systems in Games *Game Magic: A Designer's Guide to Magic Systems in Theory and Practice* explains how to construct magic systems and presents a compendium of arcane lore, encompassing the theory, history, and structure of magic systems in games and human belief. The author combines rigorous scholarly analysis with practical game design advice in the form of a magical recipe book (grimoire). The book gives you an in-depth understanding of the history and structure of magic to make your games richer and deeper. It shows how to set up tables of correspondences and spell components as well as how to write programming code integrating these components as part of game mechanics. It also illustrates how to divide a simulated world into domains of influence (such as alteration, conjuration, and necromancy) and how to use specific rule systems to simulate powers within these realms. Showing you how to weave compelling magic into your games, the book is interspersed with examples that illustrate how to design and program magic systems. Working examples are available for download on a supporting website.

This book focuses on the science fictional dimensions of Rushdie's later novels, *Fury*, *The Ground Beneath Her Feet*, *Shalimar the Clown*

and *Luka and the Fire of Life*, and Rushdie's first unpublished novel, *The Antagonist*, to show how the author's oeuvre moves towards a more consistent engagement with science fiction as a generic form and an ideological investment. The author demonstrates how Rushdie recreates personal and national histories in a science fictional setting and mode, and contends that the failure of his first novel *Grimus* may have led Rushdie away from SF for some time, although he returns to it with a much firmer conviction and a much stronger voice in his later novels, showing his commitment to this imaginative form which he describes in *Fury* as providing "the best popular vehicle ever devised for the novel of ideas and metaphysics." The science fictional mode is the most appropriate vehicle for expressing these thematic and ideological concerns and the organizing feature of Rushdie's oeuvre. The author rereads the later novels in light of recent critical engagement with SF as a vehicle for reimagining national histories and as a potentially subversive tool for social and political engagement in a fictional realm.

The Polish university is based on the Humboldt model, and can serve as a typical example of liberal education throughout Central and Eastern Europe. This book portrays an institution resistant to change and defying all attempts at reform. Currently, it is attempting to retain its identity with no regard to the rapidly changing world of science, culture and communication technologies that surrounds it. The absolute

power of the professor, excessive administration and feudal subordination mean that such universities have lost touch with the local environment, and have become a factory for graduates with a random education. Power games and resentment have replaced the search for scientific truth, which in turn means that such institutions are practically invisible in the rankings, because of the lack of significant achievements. This situation has led to proposal here of a redefinition of the function of the university, based on a thorough analysis of needs of all its various groups of stakeholders.
