Working principle of the ECT sensor In order to convert the ECT resistance variation to voltage variation, which is further processed by the ECU, the ECT sensor is connected in a circuit typically supplied with a reference voltage of +5V. In cold engine and an ambient temperature of 20 °C the sensor resistance is between 2000 and 3000 .

Engine Coolant Temperature Sensor (ECT)

Fundamentally, the engine ECU controls the injection of the fuel and, in petrol engines, the timing of the spark to ignite it. It determines the position of the engine ' s internals using a Crankshaft Position Sensor so that the injectors and ignition system are activated at precisely the correct time.

ECU (Electronic Control Unit) explained

An engine control unit (ECU), also commonly called an engine control module (ECM) or powertrain control module (PCM), is a type of electronic control unit that controls a series of actuators on an internal combustion engine to ensure optimal engine performance. It does this by reading values from a multitude of sensors within the engine bay, interpreting the data using multidimensional ...

Engine control unit - Wikipedia

So, The engine coolant temperature (ECT) sensor is designed to be fully submerged in coolant; and will not function correctly if the coolant level is low. Engine coolant prevents the water from boiling; and it also lubricates the engine block and the radiator; preventing rust formation. Finally, always use the right mix of water and antifreeze in your engine. When in doubt; consult the owner ...

The engine control unit or ECU of your vehicle is the main component of your engine system, which allows the use of all other devices. It is also called the powertrain control module and is usually installed under the dashboard of your vehicle.

Engine Control Unit (ECU) Symptoms, Function & Location

The engine ECU monitors coolant temperature and sends a signal to terminal OD1 of the ECT ECU. The ECU prevents the transmission from upshifting into overdrive and lock-up until the coolant has reached a predetermined temperature. This temperature will vary from 122°F to 162 ° F depending on the transmission and vehicle model. For specific temperatures, refer to the ECT Diagnostic Information ...

Some engine control units (ECUs) also control the throttle position electronic throttle control (ETC) or "drive by wire" systems and if that is done the position sensor is used in a feedback loop to enable that control 4.

The ECT sensor is located near the radiator, usually down inside the engine bay. Once you locate the ECT sensor, disconnect the connector cable which connects the sensor to the ECU. Unscrew the ECT sensor in an anticlockwise direction, similar to how a spark plug is removed. Install the new sensor and reconnect the connector cable.

ECU fault codes are displayed in PCLink in the ECU Status runtime values. They may also be displayed on a Check Engine Light or a digital dashboard display. Fault codes can be cleared by selecting Clear Fault Codes in the ECU Controls drop down menu. This list will be updated as new fault conditions are added. Also check all PCLink runtime values for real time information on ECU parameters.

ECU Fault Codes | Link Engine Management

The maximum allowed inlet manifold pressure can be specified for each engine coolant temperature or engine speed. The ECU controls the inlet manifold pressure by applying an ignition cut and/or a fuel cut. The MAP limit mode also has a second switchable limit table that can be used for a different scenario. Speed limit mode that limits the vehicle speed. The maximum allowed vehicle speed is ...

G4+ Xtreme Black ECU | Link Engine Management

The ECU needs to know engine speed and position in order to supply the correct fuelling and ignition timing. This is often achieved using the standard sensors, but can involve putting new sensors on the engine. Engine speed is measured using a pattern of teeth on a crank wheel or flywheel (known as a trigger wheel).

200 Series ECU - Omex Technology

For the ECU to respond correctly to the engine ' s condition it must rely on an array of sensors providing information regarding speed (Engine Speed sensor), position (Camshaft Position and Throttle Position sensors), pressure (Manifold Absolute Pressure) and temperature (Engine Coolant and Intake Air temperatures).
