The study presents data about collection digitization efforts from an international sample of academic, public and special libraries and museums. The study reports on digitization of text, photographs, music/audio, film and microfilm/fiche, covering critical areas such as equipment selection, employee training, outsourcing, budgets, funding, metadata and cataloging development, marketing, use of crowdsourcing, app development, licensing and rentals and much much more. Data is broken out by type of material digitized, by institutional

type, size of institution, and other variables to make benchmarking easier. Through numerous open ended questions survey participants provide advice on use of crowdsourcing, purchasing equipment, copyright clearance, use of social media, cataloging and metadata and more.

The contributions for this book have been gathered over several years from conferences held in the series of Mechatronics and Machine Vision in Practice, the latest of which was held in Ankara, Turkey. The essential aspect is that they concern practical applications rather than the derivation of mere theory, though simulations and visualization are important components. The topics range from mining, with its heavy engineering, to the delicate machining of holes in the human skull or robots for surgery on human flesh. Mobile robots continue to be a hot topic, both from the need for navigation and for the task of stabilization of unmanned aerial vehicles. The swinging of a spray rig is damped, while machine vision is used for the control of heating in an asphalt-laying machine. Manipulators are featured, both for general tasks and in the form of grasping fingers. A robot arm is proposed for adding to the mobility scooter of the elderly. Can EEG signals be a means to control a robot? Can face recognition be achieved in varying illumination?"

"The 34 papers presented in this book represent our best effort to present a diverse and comprehensive overview of key issues in the management and realization of digitization projects. ... This is, above all, a book written by practitioners for practitioners who together recognize the critical needs and goals in digitization in our industry"--P. x-xi.

In an accessible yet complex way, Rebekah Modrak and Bill Anthes explore photographic theory, history, and technique to bring photographic education up to date with contemporary photographic practice. --
