Written by one of ANZ's premier sustainability and social accounting academics, An Introduction to Accounting: Accountability in Organisations and Society brings today's accounting hot topics of corporate accountability, sustainability and social responsibility to life with the only complete textbook created from the ground up for these modern accounting teaching and learning concepts. An Introduction to Accounting: Accountability in Organisations and Society takes a unique approach in embracing from the start the notion of accountability for the environment and sustainability in accounting; the structure, content and learning activities provide students with an understanding of accounting's pervasive and transformative role as a social practice and organisational driver. It shows that environments, ideas and values change; the interconnectivity of society; that the planet must be respected as a resource; and that people are affected/influenced by the information they receive and the way it is presented. It is emphasised that accounting and accountability are key aspects of every person's life and that the practice of accounting, while often being seen as very technical in nature, has many social implications. Learning accounting through the lens of sustainability and the environment embeds this perspective in students' minds so that in their careers they will actively seek and use accounting information to make decisions that take into consideration accountability for the environment. "The sixth edition is written in a straightforward and engaging style and has been fully updated to reflect the latest NZ interpretations of IFRS standards. Major changes in this edition relate to areas such as financial instruments, financial statement presentation and consolidation accounting"--Back cover.

The second edition of Craig Deegan and Jeffrey Unerman's market leading text presents the various theories of financial accounting through a balanced and dynamic approach. Students are given all the tools to engage with these theories and are encouraged to critically evaluate and challenge them. Clearly written and user friendly, this new edition provides comprehensive coverage of internationally developed accounting theories from a European perspective.

The most highly regarded resource in financial accounting has been revised and updated to prepare today's students for future career success. The ninth edition of Craig Deegan's Financial Accounting features: the most recent changes to the IASB Conceptual Framework for Financial Reporting and the Australian

Accounting Standards □ a fully revised contents, a refreshed design and pedagogy □ in-depth analysis, comprehensive coverage and detailed Worked Examples □ new Real-world Case Scenarios, examples, boxes and videos linking theory to real-world applications □ new Opening Questions at the start of each chapter with suggested solutions, and revised end-of-chapter Review Questions and Challenging Questions

Clear, direct and comprehensive, Australian Financial Accounting is the market-leading text in financial accounting. Craig Deegan successfully communicates the detail necessary to understand and evaluate financial reporting. This edition is fully updated and provides students with the best foundation for their studies and future profession. New to this edition: Additional end of chapter exercises * Coverage of ongoing changes in the convergence of IASB and the US Financial Accounting Standards Board * New material detailing how the financial crisis affected other international central banks * Extensive revision of the chapter on Accounting for Financial Instruments. Inclusion of new international projects and standards and entirely new worked standards illustrating changes to practice.

What is my theory? How do I choose a theory? Why and how should I employ a particular method for collecting the empirical data? These basic questions concern everyone involved in research. A research study can be a voyage of discovering or choice of theoretical perspective as well as gathering empirics or facts on a problem or situation. This book provides a good guideline as to why and how to choose a particular theory or method to study an organisational phenomenon such as accounting. All the chapters provide both retrospective and contemporary views by scholars in the field. Each chapter documents the latest developments and research in accounting and control systems and provides valuable insights into methodological perspectives in accounting research. This second edition has also introduced a number of new chapters covering strategy-management control as practice, grounded theory approach, institutional logic and rhetoric, social interaction theory, actor-network theory and practice theory. The book is primarily intended for research students and academic researchers. It can also be used for undergraduate Honours course as well as postgraduate accounting and business methodology courses. Research organisations and consulting firms in accounting and business fields may also find this book useful. The principal aims of this second edition are (1) to update the chapters previously published in 2006 and (2) to introduce new chapters documenting recent developments in accounting research.
