Figure 6: Bar Plot Analysis. These plots have been created using R ggplot2 library. When calling the ggplot() function, we create a coordinate system on which we can add layers on top of it [2].. The first argument we give to the ggplot() function is the dataset we are going to use and the second one is instead an aesthetic function in which we define the variables we want to plot.

SAP R/3 is the oldest version of the three SAP systems considered here. The name R/3 comes from the three-level architecture of the software. The first level from the user's point of view is the presentation level on which the user interface is located. Below this is the application level, which represents the business logic.

Something that piqued my curiosity lately was the developments with SAP HANA and R (good overview here). This is definitely a new and exciting direction for SAP, with creating a well structured, and organised "Big Table" option for in memory computing, and then going the extra mile to embed a specialised Open Source Statistical Computing package (R) in it - making the fore front of the ...
