Literary Nonfiction. CALIBAN AND THE WITCH is a history of the body in the transition to capitalism. Moving from the peasant revolts of the late Middle Ages to the witch-hunts and the rise of mechanical philosophy, Federici investigates the capitalist rationalization of social reproduction. She shows how the battle against the rebel body and the conflict between body and mind are essential conditions for the development of labor power and self-ownership, two central principles of modern social organization."It is both a passionate work of memory recovered and a hammer of humanity's agenda." Peter Linebaugh, author of The London Hanged"

Featuring brilliant art, engaging new case studies, and dynamic new teaching and learning resources, this 9th edition of Porth's Pathophysiology: Concepts of Altered Health States is captivating, accessible, and student-friendly while retaining the comprehensive, nursing-focused coverage that has made it a market leader. The book's unique emphasis on "concepts" of altered health states, as opposed to factual descriptions of diseases and disorders, helps students grasp both the physical and psychological aspects of altered health. Drawing on the expertise of new co-author Sheila Grossman, the Ninth Edition maintains its comprehensive depth, while paring down content where appropriate and replacing descriptive content with striking art. (Approximately 600 illustrations are new or have been re-rendered in a consistent modern style.) Also new

to this edition are advanced 3D narrated animations that address the most clinically relevant and difficult to understand disorders, engaging unit-opening case studies that reinforce critical thinking and set the tone for the content to come, and a wide range of built-in study tools. Now, for the first time, Porth's Pathophysiology is supported by PrepU, an adaptive learning system that help students learn more, while giving instructors the data they need to monitor each student's progress, strengths, and weaknesses.

This book aims to show the importance of Criminology, which is an area of knowledge that is guided by its multidisciplinary nature, and that wants to analyze and study the criminal phenomenon, by crossing different areas of knowledge and practice through perspectives and methodologies, including social sciences, legal sciences and biomedical sciences, having as main grounds the law, sociology, psychology and medicine. It shows the identity of Criminology, which as a science, should be treated with the respect and seriousness that reliable sciences deserve. Underlining the fact that should be exercise by duly accredited professionals in the area, not only by lay people who have, just training through work experience, not underestimating the importance that this experience may have.

Do you want to stop forgetting appointments, birthdays, and other important dates? Work more efficiently at your job? Study less and get better grades? Remember the names and faces of people you meet? The good news is that it's all possible. Your Memory will help to expand your memory abilities beyond what you thought possible. Dr. Higbee reveals how simple techniques, like the Link, Loci, Peg, and Phonetic systems, can be incorporated into your everyday life and how you can also use these techniques to learn foreign languages faster than you thought possible, remember details you would have otherwise forgotten, and overcome general absentmindedness. Higbee also includes sections on aging and memory and the latest information on the use of mnemonics.

Few of us have been spared the agonies of intimate relationships. They come in many shapes: loving a man or a woman who will not commit to us, being heartbroken when we're abandoned by a lover, engaging in Sisyphean internet searches, coming back lonely from bars, parties, or blind dates, feeling bored in a relationship that is so much less than we had envisaged - these are only some of the ways in which the search for love is a difficult and often painful experience. Despite the widespread and almost collective character of these experiences, our culture insists they are the result of faulty or insufficiently mature psyches. For many, the Freudian idea that the family designs the pattern of an individual's erotic career has been the main explanation for why and how we fail to find or sustain love. Psychoanalysis and popular psychology have succeeded spectacularly in convincing us that individuals bear responsibility for the misery of their romantic and erotic lives. The purpose of this book is to change our way of thinking about what is wrong in modern relationships. The problem is not dysfunctional childhoods or insufficiently self-aware psyches, but rather the institutional forces shaping how we love. The argument of this book is that the modern romantic experience is shaped by a fundamental transformation in the ecology and architecture of romantic choice. The samples from which men and women choose a partner, the modes of evaluating prospective partners, the very importance of choice and autonomy and what people imagine to be the spectrum of their choices: all these aspects of choice have transformed the very core of the will, how we want a partner, the sense of worth bestowed by relationships, and the organization of desire. This book does to love what Marx did to commodities: it shows that it is shaped by social relations and institutions and that it circulates in a marketplace of unequal actors.

A starter box for the Cyberpunk RPG line. Everything you need to play the game.

The book offers a comprehensive account of how humor works in short stories, by presenting a model of narrative comedy that is pragmatically as well as semantically, grammatically and stylistically informed. It is the first study to combine a sequential analysis of the comic short story with a hierarchical one, merging together horizontal and vertical narratological perspectives in a systematic way. The book covers the main areas of linguistic analysis and is deliberately interdisciplinary, using input from philosophy, sociology and psychology so as to touch upon the nature, motivations and functions of humor as a cognitive phenomenon in a social context. Crucially, *The Language of Comic Narratives* combines a scholarly approach with a careful explanation of key terms and concepts, making it accessible to researchers and students, as well as non-specialists. Moreover, it reviews a broad range of historical critical data by examining the source texts, and it provides many humorous examples, from jokes to extracts from comic narratives. Thus, it seeks to anchor theory in specific texts, and also to show that many linguistic mechanisms of humor are common to jokes and longer, literary comic narratives. The book tests the model of humorous narratives on a set of comic short stories by British and American writers, ranging from Evelyn Waugh and Dorothy Parker, through Graham Greene and Corey Ford, to David Lodge and Woody Allen. The validity of the model is confirmed through a subsequent discussion of apparent counter-examples.

This exciting new textbook provides exceptional coverage of the essential topics taught in a modern operations management course. Its highly current coverage includes contemporary and relevant service theory and applications. Appropriate manufacturing applications and theory are included where relevant. The book's modern/strategic approach addresses OM from a cross-functional perspective, which views operations as linked to all other functional areas of an organization, such as marketing and finance. The strategic approach takes into consideration the integration of technology and how it changes the way a firm operates. Recognition of this current trend is the main differentiating factor for this Collier/Evans text. The book provides equal coverage of manufacturing and services theory and applications, while placing an emphasis on the integration of the value chain.
