22,989. Jun 1, 2013. #2. There's nothing wrong with that voltage, the fully charged voltage of a nominally 36 volt lithium battery is 41 volts, and the cutoff is set for about 31/32 volts. The fault is not yours, it's only that the voltage is collapsing under load, possibly due to failing cells in the battery.

I have a 400W inverter which I use to charge our ebike batteries. We have two chargers of different design although for the same type of bike. One of them works okay off the inverter, the other causes it to shut down. Charger is marked 140W at mains voltage. 36V 3A output. It's the start up current that causes the shutdown.
