OMNET++ INET MANUAL is a simulation model suite for TCP/IP and Internet-related protocols for OMNET++.INET builds upon the OMNET++, modules that communicate by message passing. Protocol models in INET: MPLS model with RSVP-TE and LDP signaling. TCP, SCTP, UDP, IPV6 and IPV4 protocols implementations.

This manual is written for users who are interested in assembling simulations using the components provided by the INET Framework. (In contrast, if you are interested in modifying INET's components or plan to extend INET with new protocols or other components using C++, we recommend the INET Developer's Guide.)

Simulator

This tutorial guides you through building and working with an example simulation model, showing you along the way some of the commonly used OMNeT++ features. The tutorial is based on the Tictoc example simulation, which you can find in the samples/tictoc directory of your OMNeT++ installation, so you can try out immediately how the examples work.

You'll need manual installation if
you downloaded an INET version
other than the latest stable one, or
you have cloned the INET git
repository to the local filesystem. The
only "tricky" part is how to import
the project into the workspace.
