This is a game for two players. The first player chooses a positive even number that is less than 50, and crosses it out on the grid. The second player chooses a number to cross out. The number must be a factor or multiple of the first number. Players continue to take it in turns to cross out numbers, at each stage choosing a number that is a factor or multiple of the number just crossed out by the other player.

The world is divided into two kinds of people: those who find numbers fascinating, and those who find numbers a necessary evil.Regardless of which of these categories you fall in, you will need numbers to a small extent, or to a large extent.Basic Arithmetic is largely about factors, multiples, and prime numbers. After one learns the four basic operations, one moves to applications of multiplication and division - chief among which are the subject of this book.Within the pages of this book, you can find all the facts relating to Factors, Multiples, GCD, LCM, and Prime Numbers in one place. You can also find thousands of practice problems, so that you can sharpen the skills you learn in the theory section, and develop both speed and accuracy. 700+ pages, 10000+ practice exercises - you will never run out!Almost anyone can use this book: if you are someone who is young and is just starting out, it's a good place to learn the basics. If you are someone who has forgotten a large part of what they had learnt about factors and multiples, you can find everything you need here. Finally, if you have feared mathematics for a long time, but are taking the first steps towards banishing your phobia, I commend you.Let's, and assure you that this book will help you.Let's get started. Have fun!
