An ancient prophecy divides two sisters- One good... One evil... Who will prevail? Twin sisters Lia and Alice Milthorpe have just become orphans. They have also become enemies. As they discover their roles in a prophecy that has turned generations of sisters against each other, the girls find themselves entangled in a mystery that involves a tattoo-like mark, their parents' deaths, a boy, a book, and a lifetime of secrets. Lia and Alice don't know whom they can trust. They just know they can't trust each other.

Early Christian communities accused each other's prophets of

madness and of making false claims to divine knowledge. This book argues that they did not seek to answer questions about true prophecy or to define madness and rationality, but rather used this discourse to control knowledge, to establish authority, and to define Christian identity.

Self-study questions are included at the end of each chapter, accompanied by answers and rationales in the back of the book. Complexity level codes (recall, application, and analysis) help you prepare for questions in the way that is most appropriate (e.g., memorization for recall or synthesis for analysis). CRT and RRT level codes speed your review by identifying the individual topics for the CRT and RRT exams, as well as topics for both. One text now covers both the entry and advanced levels of Respiratory Therapists credentialing exams, so you need only one book to prepare for CRT and RRT credentials. Chronic pain costs the nation up to \$635 billion each year in medical treatment and lost productivity. The 2010 Patient Protection and Affordable Care Act required the Department of Health and Human Services (HHS) to enlist the Institute of Medicine (IOM) in examining pain as a public health problem. In this report, the IOM offers a blueprint for action in transforming prevention, care, education, and research, with the goal of providing relief for people with pain in

America. To reach the vast multitude of people with various types of pain, the nation must adopt a population-level prevention and management strategy. The IOM recommends that HHS develop a comprehensive plan with specific goals, actions, and timeframes. Better data are needed to help shape efforts, especially on the groups of people currently underdiagnosed and undertreated, and the IOM encourages federal and state agencies and private organizations to accelerate the collection of data on pain incidence, prevalence, and treatments. Because pain varies from patient to patient, healthcare providers should increasingly aim at tailoring pain care to each person's experience, and self-management of pain should be promoted. In addition, because there are major gaps in knowledge about pain across health care and society alike, the IOM recommends that federal agencies and other stakeholders redesign education

programs to bridge these gaps. Pain is a major driver for visits to physicians, a major reason for taking medications, a major cause of disability, and a key factor in quality of life and productivity. Given the burden of pain in human lives, dollars, and social consequences, relieving pain should be a national priority.

Printing and Prophecy: Prognostication and Media Change 1450-1550 examines prognostic traditions and late medieval prophetic texts in the first century of printing and their effect on the new medium of print. The many prophetic and prognostic works that followed Europe's earliest known printed book---not the Gutenberg Bible, but the Sibyl's Prophecy, printed by Gutenberg two years earlier and known today only from a single page---over the next century were perennial best sellers for many printers, and they provide the modern observer with a

unique way to study the history and inner workings of the print medium. The very popularity of these works, often published as affordable booklets, raised fears of social unrest. Printers therefore had to meet customer demand while at the same time channeling readers' reactions along approved paths. Authors were packaged---and packaged themselves---in word and image to respond to the tension, while leading figures of early modern culture such as Paracelsus, Martin Luther, and Sebastian Brant used printed prophecies for their own purposes in a rapidly changing society. Based on a wide reading of many sources, *Printing and Prophecy* contributes to the study of early modern literature, including how print changed the relationship among authors, readers, and texts. The prophetic and astrological texts the book examines document changes in early modern society that are particularly relevant to German studies and are key texts for

understanding the development of science, religion, and popular culture in the early modern period. By combining the methods of cultural studies and book history, this volume brings a new perspective to the study of Gutenberg and later printers.

In 1954 Leon Festinger, a brilliant young experimental social psychologist in the process of outlining a new theory of human behavior - the theory of cognitive dissonance - and his colleagues infiltrated a cult who believed the end of the world was only months away. How would these people feel when their prophecy remained unfulfilled? Would they admit the error of their prediction, or would they readjust their reality to make sense of the new circumstances?
