These original interactive activities involve students in the practice of psychological research by having them play the role of an experimenter (conditioning a rat, probing the hypothalamus electrically, working in a sleep lab) or of a subject (responding to visual illusions or tests of memory, interpreting facial expressions).

Simple Heuristics That Make Us Smart invites readers to embark on a new journey into a land of rationality that differs from the familiar territory of cognitive science and economics. Traditional views of rationality tend to see decision makers as possessing superhuman powers of reason, limitless knowledge, and all of eternity in which to ponder choices. To understand decisions in the real world, we need a different, more psychologically plausible notion of rationality, and this book provides it. It is about fast and frugal heuristics--simple rules for making decisions when time is pressing and deep thought an unaffordable luxury. These heuristics can enable both living organisms and artificial systems to make smart choices, classifications, and predictions by employing bounded rationality. But when and how can such fast and frugal

heuristics work? Can judgments based simply on one good reason be as accurate as those based on many reasons? Could less knowledge even lead to systematically better predictions than more knowledge? Simple Heuristics explores these questions, developing computational models of heuristics and testing them through experiments and analyses. It shows how fast and frugal heuristics can produce adaptive decisions in situations as varied as choosing a mate, dividing resources among offspring, predicting high school drop out rates, and playing the stock market. As an interdisciplinary work that is both useful and engaging, this book will appeal to a wide audience. It is ideal for researchers in cognitive psychology, evolutionary psychology, and cognitive science, as well as in economics and artificial intelligence. It will also inspire anyone interested in simply making good decisions.

What are the changes we see over the life-span? How can we explain them? And how do we account for individual differences? This volume continues to examine these questions and to report advances in empirical research within life-span development increasing its interdisciplinary nature. The relationships between individual development, social context, and historical change are salient

issues discussed in this volume, as are nonnormative and atypical events contributing to life-span change.

GET TO THE TRUTH People--friends, family members, work colleagues, salespeople--lie to us all the time. Daily, hourly, constantly. None of us is immune, and all of us are victims. According to studies by several different researchers, most of us encounter nearly 200 lies a day. Now there's something we can do about it. Pamela Meyer's Liespotting links three disciplines--facial recognition training, interrogation training, and a comprehensive survey of research in the field--into a specialized body of information developed specifically to help business leaders detect deception and get the information they need to successfully conduct their most important interactions and transactions. Some of the nation's leading business executives have learned to use these methods to root out lies in high stakes situations. Liespotting for the first time brings years of knowledge--previously found only in the intelligence community, police training academies, and universities--into the corporate boardroom, the manager's meeting, the job interview, the legal proceeding, and the deal negotiation. WHAT'S IN THE BOOK? Learn communication secrets previously known only to a handful of scientists, interrogators and intelligence specialists. Liespotting reveals what's

hiding in plain sight in every business meeting, job interview and negotiation: - The single most dangerous facial expression to watch out for in business & personal relationships - 10 questions that get people to tell you anything - A simple 5-step method for spotting and stopping the lies told in nearly every high-stakes business negotiation and interview - Dozens of postures and facial expressions that should instantly put you on Red Alert for deception - The telltale phrases and verbal responses that separate truthful stories from deceitful ones - How to create a circle of advisers who will guarantee your success

For undergraduate social science majors. A textbook on the interpretation and use of research. Annotation copyright Book News, Inc. Portland, Or.

The 60th anniversary of the publication of George Kelly's *The Psychology of Personal Constructs* was marked, in 2015, by the 21st International Congress on Personal Construct Psychology. His two volume work set out personal construct theory as a radical new approach to psychology. Although Kelly was a clinical psychologist, personal construct psychology has had an extraordinarily broad range of influence and application, extending beyond the clinical setting to include areas as diverse as education, organizational and management development, social psychology,

the arts, law and politics. It presaged constructivist developments in many spheres of knowledge, and its innovative research methods have been used in a vast number of studies focussed on the exploration of personal and interpersonal meaning. The 21st International Congress was held in the UK at the University of Hertfordshire, forty years after the first such congress. This volume presents contributions by many of the Congress's delegates, whose chapters reflect the diversity of contemporary applications of personal construct psychology, and the continuing relevance and vitality of Kelly's ideas and methods.

David Myers' new partnership with coauthor C. Nathan DeWall matches two dedicated educators and scholars, each passionate about teaching psychological science through writing and interactive media. With this new edition of the #1 bestselling Psychology, Myers and DeWall take full advantage of what an integrated text/media learning combination can do. New features move students from reading the chapter to actively learning online: How Would You Know puts students in the role of scientific researcher and includes tutorials on key research design principles; Assess Your Strengths self-tests help students learn a little more about themselves, and include tips about nurturing key strengths. These and other innovations rest on the same foundations that have always
